The component charged with carrying all that weight is the air suspension. Weighing in at just under 6,000 pounds, just keeping the Expedition off the ground is a monumental task. Add to that a few people and cargo and you are really asking a lot of your suspension to begin with. The OEM air suspension in your car supports all this weight by using rubber air bags attached to the struts as opposed to mechanical coils.

Why Ford Expedition Air Suspensions Fail and How to Fix Them

Ford Expedition 1999, Rear New Air Suspension Kit by Unity@. Unity's priority has been to make the highest quality products available on the market. In order to achieve that goal, they have spent years researching the common problems... Exact OEM angle and dimensions for every component Metallographic test to check material structure
