Ultrasound and Carotid Bifurcation Atherosclerosis provides a comprehensive overview of the most recent advancements in instrumentation, imaging techniques including the use of contrast enhancement agents, plaque image analysis and its automation, elastography and plaque motion analysis; also, the use of ultrasonic and other biomarkers in the detection of the high risk cardiovascular individual. Finally, it deals with the application of IVUS, TCD and carotid plaque characterization in clinical practice and in stroke risk stratification. Ultrasound and Carotid Bifurcation Atherosclerosis is intended for all those working in the field of atherosclerosis, ultrasound imaging and cardiovascular risk, including the clinician, the vascular ultrasonographer, the epidemiologist, the molecular biologist, the biomedical engineer and the informatics scientist. Furthermore, this book bridges the gap between the researcher and the clinician, who is keen to incorporate the latest results of research to his daily practice.

This volume provides an integrated compilation of selected major articles published by the author in several fields of international finance. These include contributions to the understanding of currency crises and financial contagion, the evolution of exchange rate regimes, the interaction between national fiscal policies and regional monetary unions, and the effect of uncertainty on the gains from international economic policy coordination. The author spent most of his career doing research at established institutions (the Bank of Canada, OECD, and IMF), and these articles emerged from the need to understand the major economic policy issues of the day. In the book's introduction, the author discusses the motivation for these contributions and the unifying themes that emerged, while a concluding chapter provides his personal reflections and suggestions about promising avenues for further research.

Minimally invasive aesthetic procedures are an important part of dermatologists' day-to-day clinical routine. However, plastic surgeons are also becoming more willing to explore them, and minimally invasive cosmetic and aesthetic procedures are now an established interdisciplinary topic. Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons addresses the needs of both these specialties. It provides a comprehensive overview of the most relevant and widely used minimally invasive procedures, presented in a practical and straightforward style. Rather than a broad overview of the literature, it offers a step-by-step guide to clinical procedures. Each chapter explores a single clinical procedure, discussing the theoretical basis; the materials needed; the methods and techniques; clinical follow-up; before-and-after illustrations; as well as the side effects and complications and their management. It also includes a summary of tips and relevant references. With more than a hundred procedures presented and discussed in a clinically applicable format, Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons is a practical manual for all dermatology and plastic surgery practitioners who are interested in aesthetic medicine.

Case Studies in Systemic Sclerosis deals specifically with Systemic Sclerosis in a case study format. Each case presentation includes illustrative figures, a discussion of the pathophysiology relevant to the case, a discussion of management that is both evidence-based and expert opinion-based and several key references for further reading. With its easy-to-use format, this book presents multiple different manifestations of Systemic Sclerosis to a wide range of readers. Because this disease has a broad range of systemic features, Case Studies in Systemic Sclerosis is a valuable reference tool not only to the community of rheumatologists (trainees, academic and private practice rheumatologists) and dermatologists, but also potentially to internists, gastroenterologists, pulmonologists, cardiologists and nephrologists.

A collection of 13 articles originally published in scientific journals between 1987 and 1995, that call into question the dogma of Infectious AIDS.

The bestselling holy grail of trading information-now brought completely up to date to give traders an edge in the marketplace "Sound trading advice and lots of ideas you can use to develop your own trading methodology."-Jack Schwager, author of Market Wizards and The New Market Wizards This trading masterpiece has been fully updated to address all the concerns of today's market environment. With substantial new material, this second edition features Tharp's new 17-step trading model. Trade Your Way to Financial Freedom also addresses reward to risk multiples, as well as insightful new interviews with top traders, and features updated examples and charts.

For years lipids have fascinated cell biologists and biochemists due to their profound effects on cell function. "Cellular Lipid Metabolism" highlights new

concepts and recent findings, but also reviews important discoveries made in the past. Outstanding international experts contribute 13 chapters on the genetics, molecular and cell biology of lipids. Presenting analyses at the molecular level they reveal the principles by which cellular lipid metabolism functions. Further, numerous intriguing observations that cannot yet be explained are identified, stimulating the readers to future studies. This book provides an invaluable source of information for biomedical researchers in energy metabolism, vascular biology, endocrinology and lipidology.

Perfect for taking notes, agendas, to-do lists, brainstorming, or as a diary. 150 lined pages to create your way to an amazing day! Just the right size to take on the go. Makes a wonderful gift! Size: 6 x 9 inches

Dementia is a syndrome characterized by cognitive and non-cognitive symptoms. This book focuses on the clinically distinct categories of non-cognitive symptoms. These are grouped together under the umbrella term Behavioural and Psychological Symptoms in Dementia (BPSD). BPSD include agitation (describing a cluster of related symptoms including anxiety, irritability and motor restlessness, often leading to behaviours such as wandering, pacing, aggression, shouting and night-time disturbances), psychosis (referring to three main categories of symptoms: hallucinations, delusions and delusional misidentification) and mood disorders (depression, anxiety and hypomania). Other symptoms include sexual disinhibition, eating problems and abnormal vocalizations (shouting, screaming and demanding attention). There are many reasons why a patient with dementia may develop BPSD. Because of these potential different aetiologies, a full and careful assessment of possible physical, psychological and environmental factors is essential. This book will inform all of those responsible for caring for the patient with dementia about the identification of BPSD, the nature of the symptoms, assessment of their severity and recommends a structured and sequential approach to management. The authors are internationally respected, combining expertise from the fields of clinical research, psychiatry and clinical psychology to provide an integrated approach to the topic.
