Enabling EIGRP is a two steps process:- Enable EIGRP routing protocol from global configuration mode. Tell EIGRP which interfaces we want to include.

EIGRP Configuration Step by Step Guide

The router eigrp command entered in global configuration mode with autonomous-system-number argument creates an EIGRP routing instance. It is the first step in configuring EIGRP on a router as done here on R1: R1>enable
R1#configure terminal Enter configuration commands, one per line.

EIGRP routes are represented in the routing table with letter D because the protocol is based upon the DUAL algorithm. The command verifies EIGRP in the routing table. It displays the entire routing table; including remote networks learned dynamically, directly connected and static routes. It is the first command used to check for convergence.
