Energy Environment And Climate Wolfson

Synopsis. In this new study of energy use and global climate change, Richard Wolfson outlines basic science concepts as well as specific, contemporary applications in energy production and their environmental consequences. "Energy, Environment, and Climate" is structured on the premise that climate change is the dominant energy-related environmental issue of the twenty-first century. Traditional concerns like pollution and conservation of energy resources are covered with clear, scientific ...

Energy, Environment, and Climate, Second Edition, is the most contemporary book for the energy course. Written for non-science majors, the text presents the physical concepts in easy-to-understand language and asks students to apply those concepts to contemporary energy issues. Students learn to analyze the important questions that face today 's citizens and deal with the answers both qualitatively and quantitatively. End-of-chapter questions provide an opportunity for students to practice what they 've learned and provide instructors with questions that can be debated in class.

An engaging exploration of energy's impact

Energy and the Environment, 3rd Edition examines several critical topics of global importance associated with our increasing use of resource consumption and its impact on our environment. Author, Jeffrey Brack, provides updated information on pivotal issues that surround the study of energy through the exploration of basic concepts, resources applications, and problems of current interest.

Concepts from justice and ethics can significantly inform energy decision-makers. Benjamin K. Sovacool introduces readers to the injustices and insecurities inherent in the global energy system before presenting an energy justice conceptual framework consisting of availability, affordability, due process, good governance, prudence, intergenerational equity, intragenerational equity, and responsibility. He showcases the application of these principles to eight real-world case studies involving national energy planning in Denmark, the Warm Front program in the United Kingdom, the World Bank's Inspection Panel, the Extractive Industries Transparency Initiative, São Tomé e Príncipe's Natural Resource Fund, solar energy in Bangladesh, climate change adaptation efforts in least developed countries, and the Yasuni-ITT Initiative in Ecuador.
