The VTAC eGuide is the Victorian Tertiary Admissions Centre's annual guide to application for tertiary study, scholarships and special consideration in Victoria, Australia. The eGuide contains course listings and selection criteria for over 1,700 courses at 62 institutions including universities, TAFE institutes and independent tertiary colleges.

This hard cover book offers a concise, practical guide to the law relating to construction contracts in Australia. Written for engineers negotiating and administering construction contracts, it aims to assist readers in understanding the risks associated with these contracts and how to minimise them. The book is written by two experienced and respected authors who have a unique combination of local and international practical experience and professional and academic background in law and engineering. Oxford University Press Australia & New Zealand is the non-exclusive distributor of this title.

The enemy must not get the Messines Ridge at any price... So read the orders to German troops defending the vital high ground south of Ypres. On 7 June 1917, the British Second Army launched its attack with an opening like no other. In the largest secret operation of the First World War, British and

Commonwealth mining companies placed over a million pounds of explosive beneath the German front-line positions in 19 giant mines which erupted like a volcano. This was just the beginning. By the end of that brilliant summer's day, one of the strongest positions on the Western Front had fallen in the greatest British victory in three long years of war. For the ANZACs, who comprised one third of the triumphant Second Army, it was their most significant achievement to that point; for the men of the New Zealand Division, it would be their finest hour. It is difficult to overstate the importance of Messines for the Australians, whose first two years of war had represented an almost unending catalogue of disaster. This was both the first real victory for the AIF and the first test in senior command for Major General John Monash, who commanded the newly formed 3rd Division. Messines was a baptism of fire for the 3rd Division which came into the line alongside the battle-scarred 4th Australian Division, badly mauled at Bullecourt just six weeks earlier. The fighting at Messines would descend into unimaginable savagery, a lethal and sometimes hand-to-hand affair of bayonets, clubs, bombs and incessant machine-gun fire, described by one Australian as '72 hours of Hell'. After their string of bloody defeats over 1915 and 1916, Messines would prove the ultimate test for the Australians.

The enemy must not get the Messines Ridge at any price So read the orders to German troops defending the vital high ground south of Ypres. On 7 June 1917, the British Second Army launched its attack with an opening like no other. In the largest secret operation of the First World War, British and Commonwealth mining companies placed over a million pounds of explosive beneath the German front-line positions in 19 giant mines which erupted like a volcano. This was just the beginning. By the end of that brilliant summer's day, one of the strongest positions on the Western Front had fallen in the greatest British victory in three long years of war. For the Anzacs, who comprised one third of the triumphant Second Army, it was their most significant achievement to that point; for the men of the New Zealand Division, it would be their finest hour. It is difficult to overstate the importance of Messines for the Australians, whose first two years of war had represented an almost unending catalogue of disaster. Blended Learning combines the conventional face-to-face course delivery with an online component. The synergetic effect of the two modalities has proved to be of superior didactic value to each modality on its own. The highly improved interaction it offers to students, as well as direct accessibility to the lecturer, adds to the hitherto unparalleled learning outcomes. "Blended Learning in Engineering Education: Recent Developments in Curriculum, Assessment and Practice" highlights current trends in Engineering Education involving face-to-face and online curriculum delivery. This book will be especially useful to lecturers and postgraduate/undergraduate students as well as university administrators who would like to not only get an up-to-date overview of contemporary developments in this field, but also help enhance academic performance at all levels.
