Description: Ground penetrating radar (GPR) is a rapidly developing field that has seen tremendous progress over the past 15 years. The development of GPR spans aspects of geophysical science, technology, and a wide range of scientific and engineering applications. It is the breadth of applications that has made GPR such a valuable tool in the geophysical consulting and geotechnical engineering industries, has led to its rapid development, and inspired new areas of research in academia.

Theory and Applications . . .

Ground-penetrating radar is a geophysical method that uses radar pulses to image the subsurface. It is a non-intrusive method of surveying the sub-surface to investigate underground utilities such as concrete, asphalt, metals, pipes, cables or masonry. This nondestructive method uses electromagnetic radiation in the microwave band of the radio spectrum, and detects the reflected signals from subsurface structures. GPR can have applications in a variety of media, including rock, soil, ice, fresh

Wikipedia Applications By Harry

Ground Penetrating Radar (GPR) is a real-time NDT technique that uses high frequency radio waves, yielding data with very high resolution in a short amount of time. This technique uses electromagnetic waves that travel at a specific velocity determined by the permittivity of the material.

ABSTRACT This study presents results of

ground-penetrating radar surveys conducted for the exploration of unexcavated tombs at the Kharga Oasis. These surveys were carried out on two ancient tombs. The first site, located in Labakha, is already excavated, while the second site, located in Gebel El-Siwa, is still unexcavated. The goal of this study was to investigate the possibility of the ...

(commonly called GPR) is a high resolution electromagnetic technique that is designed primarily to investigate the shallow subsurface of the earth, building materials, and roads and bridges. GPR has been developed over the past thirty years for shallow, high resolution investigations of the subsurface. GPR is a time-depen
