happen again, especially to his own son. After his appointment as lead researcher in Bionics Laboratories he begins his desperate research. It takes four years, but he succeeds. He discovers NEMREC, a serum able to reconstruct DNA and cure the diseases that have driven him. It should be the beginning of a new future, but by changing the face of the world, he has unwittingly destroyed his own. His world falls apart After arriving at his laboratory to find that it has disappeared, he is sucked into a world of conspiracy and betrayal. The Agency wants NEMREC and will do anything to get it, believing it to be the most powerful scientific discovery in decades. But it wasn't just NEMREC that they wanted. The Agency wanted Ben dead, but somehow he survived. His best friend, his wife, and Ami, the

beautiful scientist who he has fallen for at work all offer to help him, but each has a different version of the truth.

They all have their own agenda, only one of them wants what he wants, and in a world where you are already dead, how is it that you are supposed to survive? What are people saying about it? Wow! This is what I found myself repeating to myself while getting lost in this chair gripping book of suspense! Sarah's book blog In four words, A BLOODY GOOD BOOK.

Fleeing Midnight City, Zoey, along with Holt, Mira and Max, must reach the Severed Tower to discover who she is, but the closer she gets to this place where the laws of physics do not apply, the more dangerous things become as her newly unlocked powers start to wane.

Graph-structured data is ubiquitous throughout the natural and social sciences, from telecommunication networks to quantum chemistry. Building relational inductive biases into deep learning architectures is crucial for creating systems that can learn, reason, and generalize from this kind of data. Recent years have seen a surge in research on graph representation learning, including

techniques for deep graph embeddings, generalizations of convolutional neural networks to graph-structured data, and neural message-passing approaches inspired by belief propagation. These advances in graph representation learning have led to new state-of-the-art results in numerous domains, including chemical synthesis, 3D vision, recommender systems, question answering, and social network analysis. This book provides a synthesis and overview of graph representation learning. It begins with a discussion of the goals of graph representation learning as well as key methodological foundations in graph theory and network analysis. Following this, the book introduces and reviews methods for learning node embeddings, including random-walk-based methods

and applications to knowledge graphs. It then provides a technical synthesis and introduction to the highly successful graph neural network (GNN) formalism, which has become a dominant and fast-growing paradigm for deep learning with graph data. The book concludes with a synthesis of recent advancements in deep generative models for graphs—a nascent but quickly growing subset of graph representation learning.

While John is on a business trip 2000 miles from home, the country is rocked by a series of devastating earthquakes of near apocalyptic proportion. Now our hero is stranded with no easy way to make it back to his loving family in need. His attempt to get home has him battling for survival against the flow of refugees fleeing the disaster area and

Imagine a distant future where technology's inexorable advance has halted for all but the richest .1% of humanity. Indigents who still have it fly spaceships that are hundreds of years old, and entreat the help of robots that are relics of the past. The wealthy, having achieved immortality through science, and secured total power through purchase of all government seats, spread and consume the last resources of the cosmos. The unlucky majority pursue one goal: The generational commitment to buying a ticket into Utopia—the virtual reality

program that simulates what in antiquity was known as heaven. Little do they question the mysterious origin and purpose of their gloried destination. For those who can't afford to upload their consciences into Utopia, and leave their physical bodies forever behind, there are few options but to live the life of an outlaw. Eight hundred years in the past, Mick Compton is ripped away through a wormhole into the dystopian future of the Messier 82 galaxy. In a place where the only thing that matters is getting into paradise, he wants only to get back home to his proper place and time, to his wife and family, so that he can right the wrongs of his past. But Sera, a battle-hardened smuggler with plans of her own for him, won't make it so easy. And a darker agenda is at play in M82—the terrorist known as The

Force of Darkness has reached a terrifying conclusion: Humanity is a virus, whose chance at equilibrium with its environment long ago failed. The only solution is complete extermination of mankind. After decades of surreptitious construction, FOD is nearly ready to detonate a quantum black hole with the power to consume the entire spread of the human race. Will Mick succumb to the draw of Utopia and forsake his desire to return to a real family? Will FOD pull off the ultimate terrorist act and destroy humanity once and for all? Find out in *Black Hull*.

discovery of finding it within oneself—perfect for fans of Rupi Kaur and Amanda Lovelace. In this stunning third collection from Madisen Kuhn, Madisen eloquently analyzes some of life's universal themes within the framework of a house. Whether it's the garden, the bedroom, or the front porch, Madisen takes you into her own "home," sharing some of the most intimate parts of her life so that you might also, someday, feel free to share some of yours. Filled with beautiful hand-drawn illustrations from Melody Hansen, this boldly intimate, preternaturally wise, and emotionally candid collection encourages you to consider what home means to you—whether it's in the lush, green-lawned suburbs or a city apartment—and, more importantly, explores how you can find it even

on a Kentucky mob in court after Dinning was beaten almost to death for defending his farm against white attackers. After moonrise on the cold night of January 21, 1897, a mob of twenty five white men gathered in a patch of woods near Big Road in southwestern Simpson County, Kentucky. Half carried rifles and shotguns, and a few tucked pistols in their pants. Their target? George Dinning, a freed slave who'd farmed peacefully in the area for 14 years, and had been wrongfully accused of stealing livestock from a neighboring farm. When the mob began firing through the doors and windows of Dinning's house, he fired back in self-defense, shooting and killing the son of a wealthy Kentucky family. So began one of the strangest legal episodes in American history -- one

that ended with Dinning becoming the first black man in America to win damages after a wrongful murder conviction. Drawing on a wealth of never-before-published material, bestselling author Ben Montgomery resurrects this dramatic and largely forgotten story, and the unusual convergence of characters -- among them a Confederate war hero-turned-lawyer named Bennett H. Young, Kentucky governor William O'Connell Bradley, and George Dinning himself -- that allowed this thrilling but unlikely story of justice to unfold in a time and place where justice was all too rare.
