Air Traffic Forecasting. This course provides airport managers and staff with the essential guidance needed to interpret air traffic forecasts and use different forecasting techniques (including a review of strengths and weaknesses). Using a combination of theory and case studies, course participants will learn about key industry drivers, the data available to forecasters and the various forecasting techniques.

~~Air Traffic Forecasting—Economics—Global Training ...~~

Traffic Forecasting. Our traffic studies deliver prospective data on future passenger/cargo volumes and aircraft activity, and provide valuable recommendations to seize market opportunities and define winning strategies. Air traffic forecasts are the foundations of each stage of airports' development. State-of-the-art, airlines-supported forecasts are key to defining appropriate future facility requirements, and to securing financing support from external investors.

~~IATA—Traffic Forecasting~~

The appropriate forecasting technique depends on the history, environment, and role of the airport. Most airports serving large urban areas are large enough to warrant sufficient competition so that activity is demand driven—that is the airlines will provide enough capacity to accommodate the demand.

~~Aviation Demand Forecasting~~

The original MP2030 forecasts (for passenger, cargo and Air Traffic Movements) were prepared by IATA in 2009. Detailed information on the forecasting approach is available in the MP2030 report issued in 2010. In short the following dual methodology was used: Top-down approach: The top-down approach aimed at projecting the market air demand in line

~~Air Traffic Forecasting Methodology by IATA~~

Three main methods (models) of forecasting air traffic are: trend projection, econometric relation ship, and market and industry surveys. These methods vary in the amount of data and statistical analysis required and to the degree to which selective judgment plays a role. 2.1. Forecasting by trend projection.
