Motoring the Future: VW and Toyota Vying for Pole Position deals with the challenges facing the global car industry today, analyzing Volkswagen and Toyota, with some surprising results. The book provides insights into each car manufacturer's corporate culture, products, production, leadership and technologies, as well as some thoughts on the future of the car. These two opponents vying for pole position could hardly be more different: Toyota, with a focus on manufacturing excellence, is dominant in its home market, the USA and south-east Asia, whereas VW, with its strategy of product excellence, leads in western Europe, Brazil and China. Industrial dominance will be important to them in the future, with both companies needing to master the next steps in product and manufacturing excellence. The race is by no means over, offering a deep insight into

the challenges for carmakers moving away from fossil fueled combustion to alternative energy vehicles for the mass market. Major players are trying to answer the key question: How will the car of the future look? VW and Toyota now need to keep ambitious competitors at bay. Timing is everything: US manufacturers are focused on their own revival; Korean and Chinese players are progressing surprisingly fast. However, it looks like the battle for pole position will likely remain between Toyota and VW. Motoring the Future offers updates on Volkswagen's and Toyota's next generation vehicles, both plotting a new course into the future. In this thoroughly revised edition the book, new facts and material have extended the scope to American manufacturers and to new competitors from the Far East.

generations, advanced biofuel production techniques, related waste treatment, emissions and environmental impacts, water consumption, produced allergens and toxins. Additionally, the biofuel policy discussion is expected to be continuing in the foreseeable future and the reading of the biofuels features dealt with in this book, are recommended for anyone interested in understanding this diverse and developing theme.

Since the mid-1990s, the emergence of hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Not have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy, environment and transport sector.
