Trees and shrubs may be lightly pruned year-round in Hawaii. Remove dead, broken, or diseased branches whenever they appear. Plants grown for foliage, such as podocarpus, privet, juniper, and yaupon holly, may be pruned at any time, because flowering is not important for these plants.

[Pruning Landscape Trees and Shrubs - University of Hawai'i](#)

If you are growing a tree for its fruit, make pruning a high priority. Heading cuts, or cutting the ends of branches, concentrate each branch's energy and encourage it to produce more fruit the following season. Thinning cuts, or removing entire limbs, allow you to take out unruly suckers and dead or diseased limbs.

[How to Prune Trees and Plants - The Spruce](#)

Pruning different types of plants requires different methods. Here are the steps to correctly pruning shrubs and trees around your yard: 1. Remove What is Dead or Dying. If you see branches which are already dead or are in the process of dying, you should cut those branches off first. Be sure to use a hand saw to remove thick branches.

[When and How to Prune Trees, Shrubs, and Flowers Correctly](#)

Routine pruning of dead or dying branches can be done at any time. However, your type of tree can have specific needs and rules for trimming. New Trees. Inspect for pruning needs annually. Prune trees

Most trees and shrubs with needlelike or scalelike foliage (spruce, juniper, cypress, arborvitae, fir, yew, Douglas fir, and false cypress) are best pruned early in the growing season. Avoid cutting back into wood that doesn't have any green needles; it may not sprout new growth.

What to Prune When | Better Homes & Gardens

Proper pruning enhances the beauty of almost any landscape tree and shrub, while improper pruning can ruin or greatly reduce its landscape potential. In most cases, it is better not to prune than to do it incorrectly. In nature, plants go years with little or no pruning, but man can ruin what nature has created.
