Rockets were invented in China, the home of many modern inventions, including ancient astronomy, and were used originally for military purposes in the 13th century. The Chinese space program was founded in October 1956 by the father of Chinese rocketry, Tsien Hsue Shen, who lived in California in the 1930s until his expulsion as a Chinese spy. In recent times there have been three manned spaceflights, highlighting China's ambitious space program and generating worldwide interest. Future missions are planned, including a mission to go to Mars. The explosive growth of China's innovative and rapidly developing space program in recent years has made it a "hot" topic in international space policy. This follow up to Harvey's earlier book, China's Space Program - From Conception To Manned Spaceflight (2004) bring us up to date with everything that is happening in the Chinese space program today and looks at its ambitious future. The author briefly summarizes how this program evolved from medieval times, and uncovers the truth behind the bland, unreliable, and generally uninformative news releases issued around each space mission. It also examines the key features of the program, previously unknown to the outside world.

This book is the first substantial study in any language of one of revolutionary Russia's most distinguished and controversial engineers - Iurii Vladimirovich Lomonosov (1876-1952). Not only does it provide an outline of his remarkable life and career, it also explores the relationship between science, technology and transport that developed in late tsarist and early Soviet Russia. Lomonosov's importance extends well beyond his scientific and engineering achievements thanks to the rich variety and public prominence of his professional and political activities. His generation - Lenin's generation - was inevitably at the forefront of Russian life from the 1910s to the 1930s, and Lomonosov took his place there as one of the country's best known and ultimately notorious engineers. As well as an innovative engineer who campaigned to enhance the role of science, he played a major role in shaping and administering the Russian railways, and undertook several diplomatic and scientific missions to the West during the early years of the Revolution. Falling from political favour during an assignment in Germany (1923-1927), he achieved notoriety in Russia as a 'non-returner' by apparently declining to return home. Thereby escaping probable arrest and execution, he began a new life abroad (1927-1952) which included a research post at the California Institute of Technology in 1929-1930, collaborative projects with the famous physicist P.L. Kapitsa in Cambridge, a long-time association with the Institution of Mechanical Engineers in London, and work for the British War Office during the Second World War. From Marxist revolutionary to American academic, this study reveals Lomonosov's extraordinary life. Drawing on a wide variety of official Russian sources, as well as Lomonosov's own diaries and memoirs, a vivid portrait of his life is presented, offering a better understanding of how science, technology and politics interacted in early-twentieth-century Russia.
