**Fill Light** – A fill light reduces the intensity of shadows created by your key light, thereby decreasing the overall contrast in your scene. **Rim light/backlight** – Rim lights light your subject from behind to help separate them from the background. Often, rim lights are positioned so that only a sliver of light is visible on the sides of your subject.

## Your Guide to Studio Lighting Equipment

Bouncing a light source also softens it — bouncing a hot shot flash off the ceiling or a white wall, for example. Using a flash softbox or taking the flash off camera and putting it on a stand with an umbrella allows photographers to take a small, hard light source and create soft lighting.

2. **Broad light.** With broad light (a type of side lighting), the face of your subject is at an angle and the most well-lit side of the face is closest to the camera and the shadow falls on the back side of the face. This type of light can make a face look fuller so it ' s ideal for those with very narrow faces. 3.

Portraiture tends to rely on standardized, established lighting techniques, but most photographers know that subscribing to traditional methods does not always flatter every subject. The techniques collected in this guide will heighten the senses of mystery and drama in a digital photographer's work by enhancing shape and contrast, keeping images fashionable and appealing with less reliance on natural light, and illuminating a subject's eyes without producing catchlights. In this manner, textbook lighting setups can act as a springboard to creating personal and artistic high-quality portraits featuring new, radically-altered lighting effects. Multiple series of before-and-after photos comprehensively illustrate how to utilize these new methods to create emotion-evoking works of art that do more than simply capture the likeness of a subject
