designed to operate predominantly on the surface, only diving to remain concealed (normally during the day).

The submarines would submerge to attack a target and then remain submerged to make their escape. •

Early submarines were powered in two ways – diesel powered on the surface,

This is the reason the great powers all operate ballistic missile carrying submarines as key elements of their nuclear deterrent forces—and why new generations of those boats are in development. And although unmanned vehicles present a significant emerging threat, submarines' ability to deploy and recover their own autonomous vehicles will give them new options at reduced risk to themselves.
